Downunder Daily

From a Credit Scare to a Growth Scare

Last Friday (*Another Stumble*), I argued that markets were in another buy-the-dip setback to the global risk trade. I thought it would be buy-the-dip because the focus was on credit, rather than growth. Taking a second look, however, there are signals that growth is starting to become an issue. If these signs intensify, it would bode ill for equities. Indeed, it would increase the risk that the end-October highs mark the peak for the bull market.

Our strategists are also more cautious. Toby Walker went neutral Australian equities on 30 October (*Moving to Neutral Australian Equities*); Jonathan Garner clipped his Overweight in emerging markets on 8 November (*2008 Outlook: Reducing Equities OW to 2%*), and Teun Draaisma went neutral European equities on Monday (*Too Much Uncertainty – Taking Profits in Equities*).

What are the signs of growth concerns? One is that the OECD's leading index for G7 production is now at its weakest level since the last recession (on a six-month change basis). This is noteworthy because historically this index has been highly correlated with excess equity returns (that is, equity returns above returns on sovereign bonds).

Exhibit 1 shows that bonds could now outperform equities for a period. Indeed, that is already happening in the US: Exhibit 2 shows equity returns relative to bond returns for the US and for developed markets. Bonds (Treasury) are now out-performing equities (S&P 500) on a year-to-date basis in the US.

November 14, 2007
Strategy and Economics

Warning signs in the emerging economies are less worrisome, but the risk of slowdown would clearly rise if, as I expect, we see ongoing downgrades to growth forecasts throughout the G7. The OECD's leading index is signaling a moderate slowdown in Asian production, although admittedly it has been doing so for some time (Exhibit 3).

Exhibit 3
A Moderate Headwind (For Now)

Source: OECD; Morgan Stanley

As importantly, market-based indicators suggest (or reflect) growing concerns about growth. Metal prices have now seen the most significant pullback since the mega-bull market commenced in 2001 (Exhibit 4). Of course, prices remain very high by historical standards.

Exhibit 4
The First Setback for Metals

The poor performance of the technology sector is worth noting. In my *Another Stumble* comment, I noted the resilience of earnings forecasts outside financials, with technology seeing upgrades. But investors typically move before consensus earnings forecasts, and the setback to the technology sector last week is a warning sign that at least some in the market are becoming more concerned

about the growth spillover of credit issues. Contrast last week with the out-performance of technology stocks through the August correction (Exhibit 5). (However, the under-performance of technology through the first three years of the bull market shows that it is not always an accurate reflection of growth sentiment.)

Exhibit 5
US IT Sees a Setback

Source: Bloomberg; Morgan Stanley Research

So where to from here? I am bearish big-picture, and I think what will end the bull market is a material deterioration in growth and earnings forecasts. I think those signs will first appear in the US. I've usually pointed to non-farm payrolls as the single most important indicator, the one that signals a shift from the soft-landing to the hard-landing scenario in the US – and the indicator that, as far as I can tell, would do most to shake the consensus view that remains for a soft landing.

However, I've also argued that if I'm going to get my timing wrong, I'd rather be late than early. That's because late-cycle rallies can be particularly fast, so the cost of getting out too early can be large in performance terms. I also expect that the bear market will be an elongated (and, in the Anglo world, deep) affair, as markets fall in line with earnings. On that basis, being too early to sell equities may be more costly than being too late.

In my view, that suggests even now waiting for more evidence of the turn in growth and profits before flicking the switch to structural bear. My best guess remains that that evidence to turn strategically bearish will come to hand in the first half of next year.

Disclosure Section

The information and opinions in Morgan Stanley Research were prepared or are disseminated by Morgan Stanley Asia Limited (which accepts the responsibility for its contents) and/or Morgan Stanley Asia (Singapore) Pte. (Registration number 199206298Z, regulated by the Monetary Authority of Singapore, which accepts the responsibility for its contents), and/or Morgan Stanley Asia (Singapore) Securities Pte Ltd (Registration number 200008434H, regulated by the Monetary Authority of Singapore, which accepts the responsibility for its contents), and/or Morgan Stanley Taiwan Limited and/or Morgan Stanley & Co International plc, Seoul Branch, and/or Morgan Stanley Australia Limited (A.B.N. 67 003 734 576, holder of Australian financial services license No. 233742, which accepts responsibility for its contents), and/or Morgan Stanley India Company Private Limited and their affiliates (collectively, "Morgan Stanley").

Analyst Certification

The following analysts hereby certify that their views about the companies and their securities discussed in this report are accurately expressed and that they have not received and will not receive direct or indirect compensation in exchange for expressing specific recommendations or views in this report: Gerard Minack.

Unless otherwise stated, the individuals listed on the cover page of this report are research analysts.

Global Research Conflict Management Policy

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflict/policies.

Important US Regulatory Disclosures on Subject Companies

The research analysts, strategists, or research associates principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Different securities firms use a variety of rating terms as well as different rating systems to describe their recommendations. For example, Morgan Stanley uses a relative rating system including terms such as Overweight, Equal-weight or Underweight (see definitions below). A rating system using terms such as buy, hold and sell is not equivalent to our rating system. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of October 31, 2007)

For disclosure purposes only (in accordance with NASD and NYSE requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Underweight to hold and sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)		
	Count	% of Total	Count	% of Total % of Rating IBC	Category
Overweight/Buy	958	42%	313	44%	33%
Equal-weight/Hold	989	43%	312	44%	32%
Underweight/Sell	328	14%	85	12%	26%
Total	2,275		710		

Data include common stock and ADRs currently assigned ratings. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations. Investment Banking Clients are companies from whom Morgan Stanley or an affiliate received investment banking compensation in the last 12 months.

Analyst Stock Ratings

Overweight (O or Over) - The stock's total return is expected to exceed the total return of the relevant country MSCI Index, on a risk-adjusted basis over the next 12-18 months.

Equal-weight (E or Equal) - The stock's total return is expected to be in line with the total return of the relevant country MSCI Index, on a risk-adjusted basis over the next 12-18 months.

Underweight (U or Under) - The stock's total return is expected to be below the total return of the relevant country MSCI Index, on a risk-adjusted basis, over the next 12-18 months.

More volatile (V) - We estimate that this stock has more than a 25% chance of a price move (up or down) of more than 25% in a month, based on a quantitative assessment of historical data, or in the analyst's view, it is likely to become materially more volatile over the next 1-12 months compared with the past three years. Stocks with less than one year of trading history are automatically rated as more volatile (unless otherwise noted). We note that securities that we do not currently consider "more volatile" can still perform in that manner.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index.

Stock price charts and rating histories for companies discussed in Morgan Stanley Research are available at www.morganstanley.com/companycharts or from your local investment representative. You may also request this information by writing to Morgan Stanley at 1585 Broadway, (Attention: Equity Research Management), New York, NY, 10036 USA.

Other Important Disclosures

For a discussion, if applicable, of the valuation methods used to determine the price targets included in Morgan Stanley Research, and the risks related to achieving these targets, please refer to the latest relevant published research on these stocks. Research is available through your sales representative or on Client Link at www.morganstanley.com and other electronic systems.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The securities/instruments discussed in Morgan Stanley Research may not be suitable for all investors. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of a particular investment or strategy will depend on an investor's individual circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them.

Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The "Important US Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities or derivatives of securities of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities or derivatives of securities of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

Morgan Stanley and its affiliate companies do business that relates to companies/instruments covered in Morgan Stanley Research, including market making and specialized trading, risk arbitrage and other proprietary trading, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis.

With the exception of information regarding Morgan Stanley, research prepared by Morgan Stanley Research personnel are based on public information.
